PRESTENTATION OVERVIEW

OBJECT

WHY?

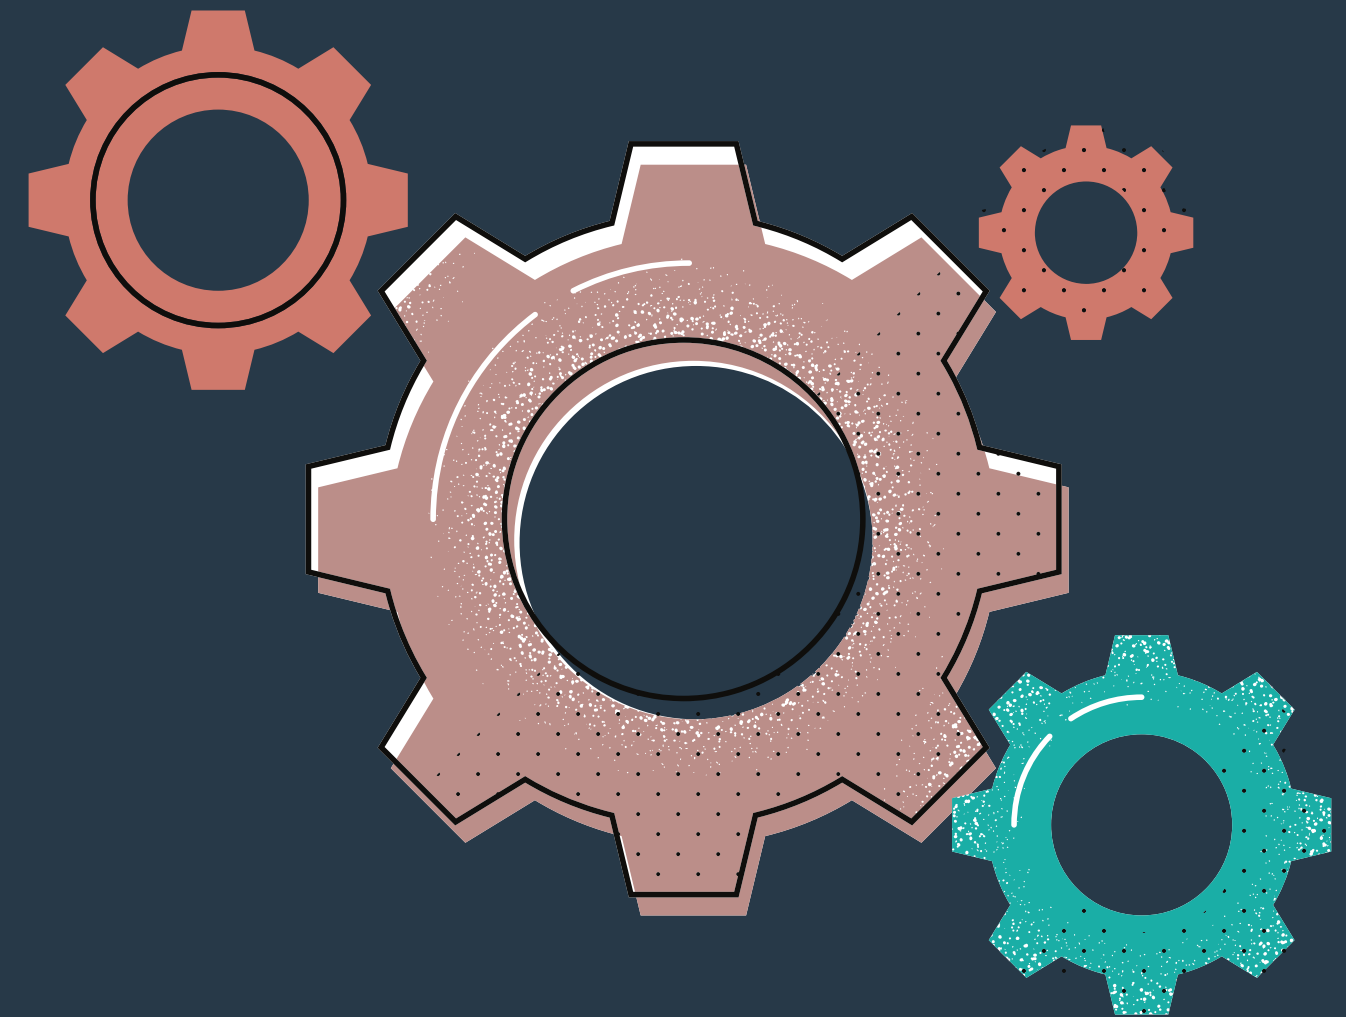

HOW?

DEMO TIME

OBJECT

AUTHENTICATION FOR ONLINE
STORAGE SYSTEM: VERIFY
USERNAME AND PASSWORD
SENT FROM CLIENT

WHY SHOULD YOU USE OUR VERIFY METHOD?

It's easy to understand
and use. And basically,
it works and that is the
thing that matter!

How does it work?

CREATE A SERVER

Accept connect from a client (in our demo we connect to client not Load Ballancer and it may work the same).

CREAT A TEXT FILE

This text file will hold the list of usernames and passwords. Each username and password separated by a tab.

How does it work?

CONNECT TO CLIENT

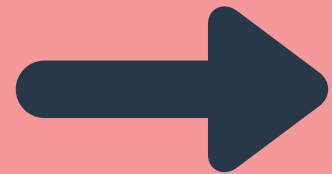

Receive username and password from client which separate by a tab

VERIFICATION

Open text file and compare username and password that we received with the one we have in text file

RETURN RESULT

Log in successfully or Wrong username and password

It's time
for demo!

THANK YOU FOR
LISTENING!
